

Janrain Developer Certification

Our Developer Certification training equips partners and customers to implement high-quality, innovative Janrain solutions. The two-day course includes conceptual discussions, system demonstrations, and hands-on activities to maximize the learner's ability to pass the Janrain Developer Certification assessment.

Topics include:

- Engage and Social Login
- Janrain Console
- Configuration API Overview
- Data Storage and Access
- OAuth APIs
- Customer Insights 2.0 Overview

After successful completion, Certified Developers will receive the latest information and training on Janrain products and services, enhancing their ability to implement the latest in secure CIAM solutions.

janrain | first in identity

THE JANRAIN IDENTITY CLOUD®

The first choice of global enterprises for mission-critical customer identity and access management (CIAM), the Janrain Identity Cloud provides real-time identity management, identity security, and identity activation solutions that enable seamless and safe customer experiences across their digitally connected world, while providing enterprise organizations with deep customer insights.

About Janrain University

Janrain is committed to our clients' and partners' success. We've developed training curriculums to make the most of the investment in the Janrain Identity Cloud® through more efficient deployment, deeper levels of customization, and more fruitful end-user experiences.

Our courses are designed to accommodate all ranges of technical expertise and a wide variety of organizational roles. In addition, we have specialized offerings for Janrain technical partners so that they may develop the deepest possible understanding of our architecture, deployment options, and integrations.

Courses are available for delivery on-site or online. Contact your Janrain representative or University@Janrain.com for more information.
